

How to try the application out:

1. **run in the root folder**: `docker-compose -f src/main/docker/mysql.yml up`
2. **run the RealEstatePortalApp spring application.**

3. **navitage to**: `real-estate-portal->src->main->resource ->swagger->api.yml`
4. If you don't have, **install** the swagger plugin in your IntelliJ.

5. Click on a web browser icon at the upper right corner in the api.yml file

6. Have fun! You can try the api out via swagger UI.
